

Hello... I am an xm subscriber and a tractor trailer driver. I oppose HR4026, the purpose of having satellite radio is the constant travel through different markets, with the constant and clear reception of satellite traffic and weather updates which allow me to plan my travel ahead of running into any road or weather problems. I have found this service to be invaluable to your nation's truckers who work hard to get your needs to market in a timely fashion. I pay for this service... and it seems to me to be illegal to tamper with this valuable service.

Is there not many more important things to waste your time, and our money on..?
Respectfully Submitted, Jason Nichols
